BURBANK, Calif. (March 7, 2019) — After creating the first-ever university scholarship endowment — [The Big Bang Theory Scholarship Endowment at UCLA](#) — named after a television series four years ago, The Chuck Lorre Family Foundation (TCLFF) announced today that in honor of the show's final season, it has doubled down on its support of *The Big Bang Theory* endowment for undergraduate scholars in the fields of Science, Technology, Engineering and Mathematics (STEM). Established in 2015, the Endowment initially provided for five annual scholarships, in perpetuity, for students in financial need. The endowment was originally funded via a founding donation by TCLFF combined with gifts from more than 50 individuals associated with the series — including the show's stars, executive producers, writers and crew — plus partners such as Warner Bros. Television, CBS, ICM Partners, United Talent Agency and more. With renewed donations to celebrate the end of the series, more than 80 individuals have made contributions to date, allowing for *The Big Bang Theory* scholarship to now fund 10 scholars each year in perpetuity. The Endowment currently supports 35 *TBBT* scholars and has raised more than \$5.5 million for UCLA students in financial need studying in STEM fields.

Dell Technologies, a longtime supporter of advancing science and technology skills, has also made a donation to the undergraduate Endowment and will be gifting the first graduating class of *TBBT*/UCLA scholars with new Alienware m15 laptops at a special celebration on *The Big Bang Theory* set with the producers, cast and crew.

Additionally, TCLFF has announced the establishment of *The Big Bang Theory* Graduate School Fund. This fund will provide five-year scholarships of up to \$20,000 per year exclusively for graduating *TBBT*/UCLA scholars who will be continuing their STEM education in graduate school within the University of California system. *TBBT*/UCLA graduating scholars who will be pursuing their graduate studies outside of the UC system will be eligible for a one-time grant of \$20,000.

- The first class of 20 scholars was selected for the 2015–16 academic year, with the endowment initially committed to support an additional five scholars in each future academic year — in perpetuity. With today's announcement, *The Big Bang Theory* Scholarship Endowment will now support 10 undergraduate scholars at UCLA in each future academic year — in perpetuity.

- Scholarships are awarded based on financial need to low-income students who have earned admission to UCLA based on academic merit but need additional support to bridge the gap between typical levels of financial aid and the cost of attendance. Each year, the students visit the show's set to be honored by the cast and crew, and the scholars have created an official UCLA on-campus club which provides mentorship and weekly study groups.
- Beginning with the 2019–20 academic year, *The Big Bang Theory* Graduate School Fund will provide up to \$20,000 per year for five years of scholarship support exclusively to qualified *TBBT*/UCLA graduating scholars who are pursuing advanced degrees in STEM fields within the UC system. *TBBT*/UCLA scholars attending graduate school outside the UC system will be eligible to receive a one-time grant of \$20,000.
- In addition to its financial contribution to the Endowment, Dell Technologies has gifted each of the inaugural graduating class of *Big Bang Theory* scholars with Alienware laptops, which have been featured in many *TBBT* episodes. The new [Alienware m15](#) is the lightest and thinnest 15" gaming laptop ever from Alienware, with powerful performance for both gaming and their future careers. The laptops include eighth generation Intel Core i7 processors, NVIDIA GeForce graphics, AlienFX and the Alienware Command Center software.
- This continues Dell Technologies' long-standing relationship with *The Big Bang Theory*, as the company has provided computers for use on-screen by the show's characters throughout the 12 seasons of the hit comedy.

In addition to centering many of its episodes in the worlds of science and technology, *The Big Bang Theory* enjoys a healthy appreciation and support from the scientific community at large. And the show's connection to UCLA extends beyond the scholarship fund: Series star Mayim Bialik earned a Ph.D. in neuroscience from UCLA, while professor of physics and astronomy David Saltzberg, Ph.D., serves as the show's science consultant.

*The Big Bang Theory* airs Thursdays at 8/7c on CBS and five nights a week in syndication. The acclaimed comedy ranks as the #1 entertainment series on broadcast network television among Adults 18–49 and Total Viewers for the 2018–19 television season to date. It will conclude its 12<sup>th</sup> season in May 2019 as the longest-running multicamera comedy in television history, with 279 episodes.

At UCLA, more than 50 percent of all undergraduate students receive need-based scholarships, grants or other aid. That includes approximately 35 percent of undergraduates who receive Pell Grants, federal aid for students from low-income families. More than one-third of UCLA graduates are the first in their family to graduate from a four-year college or university.

In addition to its support for *The Big Bang Theory* Scholarship Endowment at UCLA, The Chuck Lorre Family Foundation recently created a new public school grant program — [The Young Sheldon STEM Initiative](#) — inspired by the hit comedy series *Young Sheldon*. The program was created to foster excitement for learning in STEM fields, specifically in support of U.S. public

schools, teachers and students. The program funds two-year educational grants totaling more than \$600,000.00 which are awarded to 19 select elementary, middle and high schools in Southern California, where *Young Sheldon* is produced, and East Texas, where the show is set.

**About *The Big Bang Theory***

From Chuck Lorre Productions, Inc., in association with Warner Bros. Television, *The Big Bang Theory* stars Johnny Galecki, Jim Parsons, Kaley Cuoco, Simon Helberg, Kunal Nayyar, Mayim Bialik and Melissa Rauch. Chuck Lorre, Steve Holland, Steven Molaro, Bill Prady, Dave Goetsch, Eric Kaplan and Maria Ferrari are executive producers of the series, which was created by Lorre & Prady.
